RECEIVED
OCT 07 2002
Technology Center 2600

Dear Sir:

In response to the Office Action mailed June 28, 2002, Applicant respectfully submits the following amendments and remarks.

IN THE SPECIFICATION:

Please replace the paragraph starting at line 7, page 7 with the following new paragraph:

The modem 100 may be equipped with a process for providing soft resets. A reset signal, while the modem 100 is in transmit mode, may occur in several instances. For example, during uplink transmission, a software module may be too slow in sending data to the modem 100, as may occur if the data is modulated using quadrature amplitude modulation 64. In such a case, the limited data received by the modem 100 may cause an interrupt to be generated. The modem 100 then halts the transmit interface and sets a transmit-reset bit. The modem 100 then flushes, realigns, and reprograms the necessary buffers. Once this process is completed, the modem 100 restarts the transmit interface, completing the reset operation.
